A23682

A23682

glycine receptor alpha-3 chain precursor - rat
C;Species: Rattus norvegicus (Norway rat)
C;Date: 04-Oct-1991 #sequence_revision 04-Oct-1991 #text_change
C;Accession: A23682
R;Kuhse, J. Schmieden, V.; Betz, H.
J. Biol. Chem. 265, 22317-22320, 1990
A;Title: Identification and functional expression of a novel lig
A;Reference number: A23682; MUID:91093073; PMID:2176214
A;Accession: A23682
A;Status: preliminary
                                                                                                                                                                                                                                                                                                                                                            A; Molecule type: mRNA
A; Residues: 1-464 <KUH>
A; Cross-references: GB:M55250; GB:M38385;
C; Superfamily: acetylcholine receptor
C; Keywords: transmembrane protein

-!- SUBCELLULAR LOCATION: Integral membrane protein.
-! ALFERNATIVE PRODUCTS: 2 ISOFORMS; ALPHA-2* (SHOWN HERE) AND ALPHA-2B ARE PRODUCED BY ALTERNATIVE SPLICING.
2B; ARE PRODUCED BY ALTERNATIVE SPLICING.
-! TISSUE SPECIFICITY: THE GLYCINE RECEPTOR IS ABUNDANT IN THE SPINAL CORD AND BRAINSTEM OF VERTEBRATES.
-! DEVELOPMENTAL STAGE: THE ALPHA-2* SUBUNIT ISOFORM IS PRESENT IN NEONATAL RATS. ISOFORMS ALPHA-2B AND ALPHA-2B ARE PRESENT IN THE PRE- AND NEONATAL BRAIN. AT LATER POSTNATAL STAGES, ALPHA-2A LEVELS GREATLY DECREASE WHILE ALPHA-2B IS BARELY DETECTABLE.
-! MISCELLANEOUS: THE ALPHA SUBUNIT BINDS STRYCHNIME.
-! MISCELLANEOUS: THE ALPHA SUBUNIT BINDS STRYCHNIME.
-! MISCELLANEOUS: IDENTICAL TO THE HUMAN ALPHA-2 SUBUNIT, EXCEPT FOR SUBSTITUTIONS AT POSITIONS 18, 24, 37, 194 AND 404. SUBSTITUTION AT POSITIONS AT POSITIONS 18, 24, 37, 194 AND 404. SUBSTITUTION BELONGS TO THE LIGAND-GATED IONIC CHANNEL FAMILY.
-! SIMILARITY: BELONGS TO THE LIGAND-GATED IONIC CHANNEL FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     "Alternative splicing generates two of the inhibitory glycine receptor FEBS Lett. 283:73-77(1991).

DOMAIN: THE N-TERMINAL DOMAIN CARRIES STRUCTURAL DETERMINANTS ESSENTIAL FOR AGONIST AND ANTAGONIST BINDING. TM2 IS THOUGHT TE ESSENTIAL FOR AGONIST AND ANTAGONIST BINDING. THE CYTOPLASMIC FORM THE INNERT WALL OF THE CHLORIDE CHANNEL THE CYTOPLASMIC IS AN IMPORTANT DETERMINANT OF CHANNEL INACTIVATION KINETICS.

MISCELLAMBOUS: THE ALPHA SUBUNIT BINDS STRYCHNINE.

SIMILARITY: BELONGS TO THE LIGAND-GATED IONIC CHANNEL FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SUBCELLULAR LOCATION: Integral membrane protein.

Glycine receptor alpha-1 chain precursor (Glycine subunit) (Strychnine binding subunit)
             "A nonsense mutation in the alphal subunit of the inhibitory gly receptor associated with bovine myoclonus."; Mol. Cell. Neurosci. 17:354-363(2001).

-I- FUNCTION: THE GLYCINE RECEPTOR IS A NEUROTRANSMITTER-GATED I CHANNEL. BINDING OF GLYCINE TO ITS RECEPTOR INCREASES THE CHECONDUCTANCE AND THUS PRODUCES HYPERPOLARIZATION (INHIBITION NEURONAL FIRING) (BY SIMILARITY).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SUBUNITS. A THIRD TYPE OF SUBUNIT (93 kDa) IS A PERIPHERAL MEMBRANE PROTEIN ASSOCIATED WITH THE CYTOPLASMIC DOMAINS OF TRECEPTOR CORE (BY SIMILARITY).

SUBCELLULAR LOCATION: Integral membrane protein.

MISCELLANEOUS: THE ALPHA SUBUNIT BINDS STRYCHNINE.

SIMILARITY: BELONGS TO THE LIGAND-GATED IONIC CHANNEL FAMILY.

Glycine receptor alpha-1 chain precursor (Glycine
Identification and chromosomal localization of a J. Biol. Chem. 269:2607-2612(1994).

1. FUNCTION: THE GLYCINE RECEPTOR IS A NEUROTRAN CHANGEL BINDING OF GLYCINE TO ITS RECEPTOR I CONDUCTANCE AND THUS PRODUCES HYPERPOLARIZATI NEURONAL FIRING.

1. SUBUNIT: PENTAMER COMPOSED OF ALPHA (48 kDa) SUBUNITS A THIRD TYPE OF SUBUNIT (93 kDa) IS MEMBRANE PROTEIN ASSOCIATED WITH THE CYTOPLAS
                                                                                                                                                                                                                                                                                                                                                                                                                    Ryan S.G., Buckwalter M.S., Lynch J.W., Handford C.,

SUBCELLULAR LOCATION: Integral membrane protein.

ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND ALTERNATIVE SPLICING.

SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING.

SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPASMODIC (SPD), A MOU DISEASE; DEFECTS IN GLRA1 ARE A CAUSE OF SPASMODIC (SPD), A MOU MUTANT WHICH RESEMBLES TO THE HUAUSE OF SPASMODIC AND MUTANT WHICH RESEMBLES TO THE LIGAND STRYCHNINE.

HYPEREKPLEXIA (OR STARTLE DISEASE (STHE)).

MISCELLANEOUS: THE ALPHA SUBUNIT BINDS STRYCHNINE.

SIMILARITY: BELONGS TO THE LIGAND GATED IONIC CHANNEL FAMILY.
